Arts & Design/Ceramics

Space for creativity

Creating the perfect conditions for creative development demands experience in transforming the mundane into the unique. ST offers the benefits of this experience absolutely free to all of our clients.

Bright and open rooms with a high level of flexibility encourage creative and group-based activities without the need for constantly re-adjusting the furniture. Large working tables that can be moved as required add life to the room as well.

ST Education is a proactive and innovative partner in both renovation and new build projects. Half a century of experience gives us in-depth knowledge, understanding and competence to not only design and equip any project area, but also first class delivery and installation.

We can assist any client to realise their ideal teaching environment. The solutions which we offer will be fully discussed and presented to meet the most demanding of budgets, and always comply with current safety issues, procedures, regulations and legislation.

The ST Education solution portfolio is a superb blend of distinct knowledge and consistent use of the most durable raw materials from sustainable sources.

▲ With the use of height adjustable tables, we comply with DDA requirements, which means that everyone can join in.
Ample space for drying, storage and displays of ongoing projects can be an advantage. This solution can also be used for craft and design technology and food technology.

Functional solutions

Large, mobile working tables on lockable nylon castors and mobile white/chalk boards offer extremely flexible and practical teaching areas. The use of paint and other art materials often means that surfaces will become splashed and wet or messy. Adequate and appropriate methods for cleaning down and washing/rinsing of materials/apparatus will always be included.

▲ Regardless of shape or application, clay firing is always popular and part of the creative process. Kilns should be placed in separate rooms and with separate ventilation.

▲ Freedom to be creative – the following clean-up is easily carried out with modern, easy to clean surfaces.

▲ Cutting table with paper shelves. A great solution for cutting up paper and storage.

▲ Wide sink with a good depth and double tap can be used by more pupils simultaneously.

▲ Mini spray cabinet with extraction for smaller spray paint jobs.

▲ Mobile drying shelves – indispensable in an art room.

The art room - for all creative purposes and challenges

Art and design has many expressions in material and shape. The art room must be able to handle both the easy as well as the heavier and long lasting projects.

Some elements of projects may require process ventilation. Ideally, craft and design technology and science rooms should be placed as close to the art room as possible (for new build) to benefit from an effective, safe and healthy fume/dust extraction solution.

Independent storage facilities for technical equipment and material are an advantage and often one that gets overlooked. At ST Education, we consider all aspects of the requirements; appropriate and adequate storage is a key part of our solution.

Our experienced sales team will be delighted to offer impartial advice on optimum room design and furniture solutions for your next project.
