

Design & Technology

Room for creativity

Flexible and functional solutions

Sewing cupboard (width: 120 cm)
with double doors and locks.

Portable shelving unit for storage

Height adjustable ironing board with compulsory point exhaust

A workshop with functional storage, efficient ventilation and safety is a good place to learn about crafts and materials.

Storage of fabrics, yarn and other accessories require much space. Wide cupboards with double doors provide optimum space with easy access. Solid wooden pull-out trays, storage boxes and wire baskets provide a high degree of combination and flexibility.

EFFICIENT USE OF SPACE

A wide range of cupboards designed to fit the needs in the workshop make storage of tools and materials easy and efficient.

We have several models of cupboards for scissors, yarn and sewing accessories as well as large mobile and height adjustable tables for cutting and preparation of textile design. Room for colouring, exhibition and other activities is also an option when designing the layout of the workshop.

Knowledge and proficiency

Height adjustable workbench with 4 sides provides flexibility and room for cross-curricular projects.

Lockable tool cupboards with complete set of tools

Cross-curricular teaching and collaboration in creative projects are possible when using our flexible furniture solutions in the workshop.

Woodwork classes provide students with craftsman skills. The room must be designed and built to handle multiple materials at the same time – at least wood and metal.

COMBINED CLASSROOMS

If special-subject classrooms for woodwork, arts and crafts and science subjects are placed near each other or end to end, it will create more synergy. In addition to the practical aspect with joint installations and ventilation, more contiguous classrooms provide increased flexibility and excellent facilities for working with projects or different subjects.

See examples of a combined classrooms on the following page.
